

AR-VR STORY BOARD

MOVIE NIGHT - PROJECT :-

As its a movie night the first thing comes to my mind is 3-d glasses , pop-corn and Soda .

So if the ~~only~~ the face of the person is visible then we will add a 3-d glass

we can also add a seat texture

And will darken the Background.

If he shows his hand then we can add a popcorn bucket and a soda can

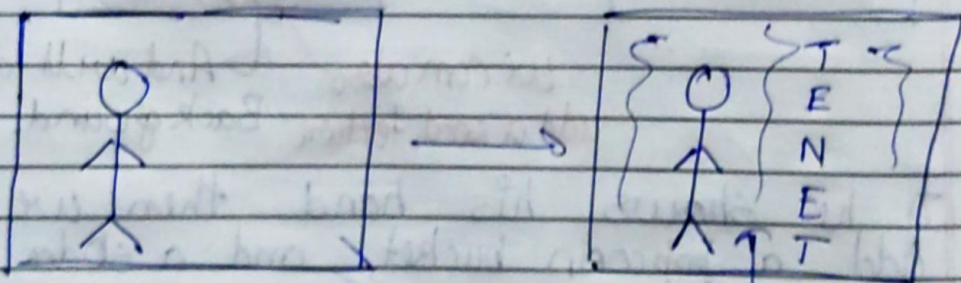

Again we will darken the Background.

When ever we go to theater we take a pic with the poster of the movie. Right?.

So here as i also did the web dev of it i added option of selecting a movie they want to watch and the most voted movie would be permised. So, kind off supporting a movie.

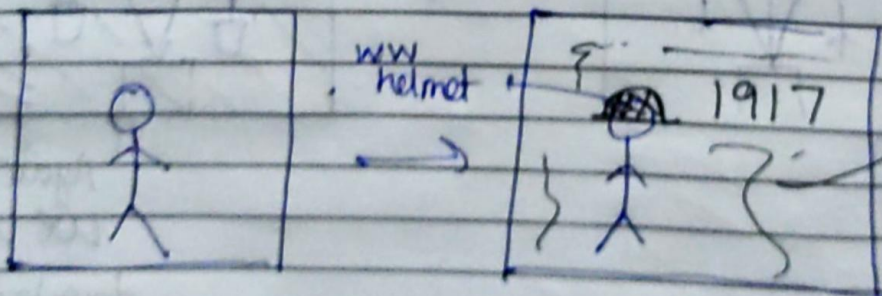

So we can also bring this to social media by adding movi posters in background.

i) TENET

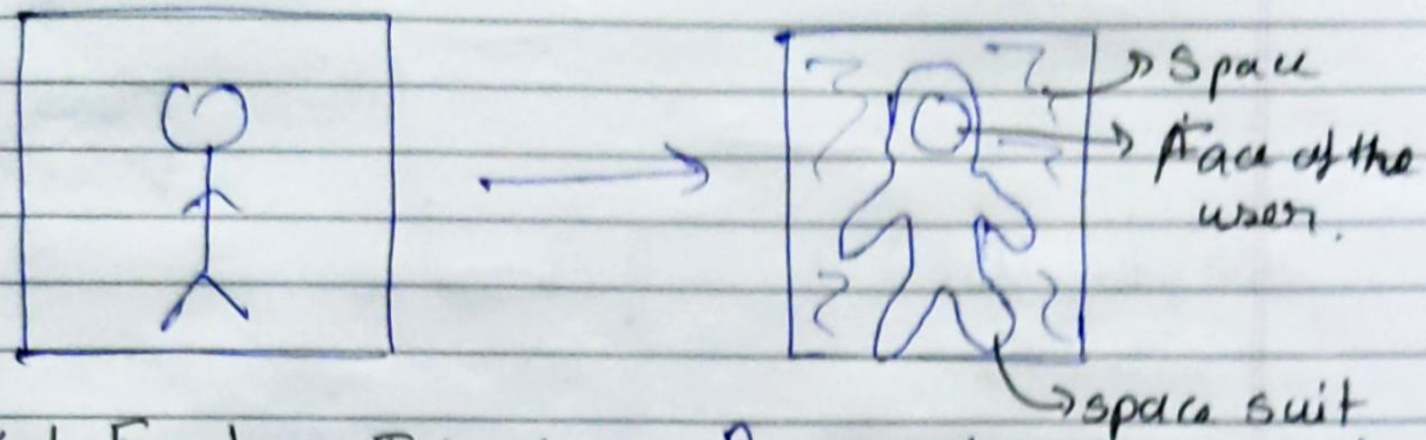

Some graphics

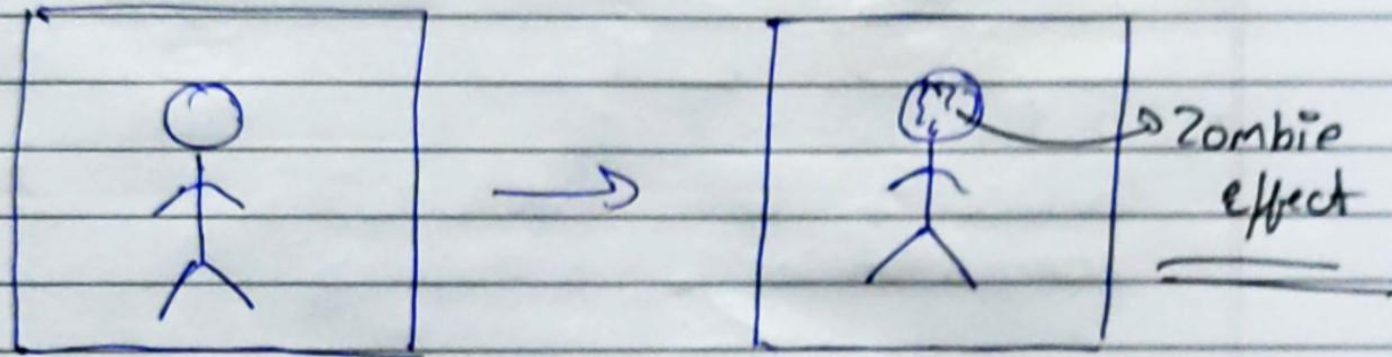

ii) 1917 a movie on world war so

iii] Ad Astra → Sifi Space Adventure

iv] Fantasy Island → A prequel of a serial on zombie

So by adding this filters of specific movie we would engage more users too.
